How do you determine the purchase of a new cleaning machine/blasting cabinet?

Some important guidelines:

1. Which parts should be cleaned/blasted? Photos of the parts?
2. What are the dimensions of the parts?
3. Weight of the parts?
4. How many parts should be cleaned/blasted daily?
5. Number of working hours per day?
6. What kind of dirt is on the parts?
7. What is the available voltage/hertz/ampere in your company?
8. Diameter of the water supply pipe/discharge pipe?
9. Diameter of the compressed air pipe? What pressure and flow are available?
10. What are the access options to supply the machine into your company?
11. What are the unloading possibilities?
12. Is there internal transport in your company?
13. Within what time limit do you want to purchase the cleaning machine/blasting cabinet?

At any time you can return your information to the above questions to info@laborex.be
On the basis of this information we can send you our machine proposal that is best suited for your application. For more information, visit www.laborex.com
